Foundations Project Proposal

Group members: Nikhil Kishore, Priya Khoker, Sachin Verma, Neil D'Souza

The project aims to see if crime rate and number of educational establishments in an area are affected by the same factors. We will look at what factors influence crime rate and number of educational establishments individually and check if they are the same for both. We are not assuming any causation but want to test for relation between factors. Our main tools will be regression analysis, feature selection and principal component analysis.
